Skylight awnings

Your sun protection system dealer:

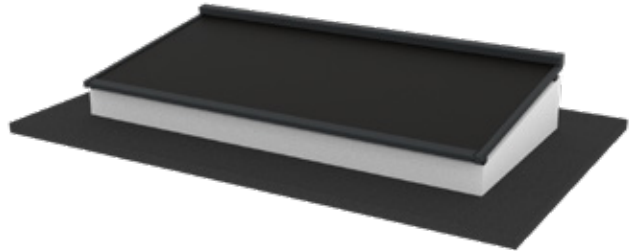

SOLID SKY®

Skylight awnings

The SolidSky – specially developed for skylights. This solar shading system uses the same zip fastener method as our tried-and-tested SolidScreen products. This also means that SolidSky is wind-resistant as well as extremely durable.

The exceptionally compact design – the cabinet has dimensions of 105 mm and the guide profiles are very slender – makes SolidSky unique in its class. The overall construction is therefore a lot lighter and SolidSky opens and closes a lot more quietly than the average skylight awning, without any loss of power. This all makes it possible to fit a SolidSky simply and effectively with just four supports.

SolidSky is available as standard in a variety of RAL colours. Other RAL colours are available on request. Delivered as standard with zip-guided Soltis 86, Soltis 92 and Soltis Lounge fabric awning, for which you can choose between no less than 23 different colours.

Features

- ☞ Specially developed for skylights
- ☞ Tried-and-tested SolidScreen technology
- ☞ Compact cabinet and housing
- ☞ Cuts out both light and heat
- ☞ Low-noise operation (specially developed pneumatic spring)
